

Complement On-Premise CCTV

Camera-to-Cloud recording is the perfect supplement to existing security solutions to capture and retain mission critical video.

Ideal for: Existing solutions that are maxed out on channel counts • Remote locations • New installs that demand off-premise storage

Benefits of Adding Cloud to an On-premise Security Solution

- **Mission Critical Coverage** Capture video of critical coverage areas—such as entryways or cash registers—without risk of loss due to tampering and/or theft of your local storage device.
- **Easy Expansion** If the on-premise system is maxed out on channel count, Alibi Cloud VS makes it easy to add additional cameras simply by connecting them to the Cloud via the local network.
- **Remote Location Coverage** Expand security coverage to remote buildings or annexes without having to deploy a separate on-premise recording device.

Flexible and Secure

- Select storage requirements—days, weeks, months, or years—based on evidence needs and video retention requirements. Only pay for the storage required by the specific application.
- All video stored in T4 data centers—featuring end-to-end data encryption and 3x data redundancy.
- Continuous security patches and automatically applied firmware updates keep customer data ultra-secure.

See what the cloud can do for your business.
