

VIDEO CONTENT ANALYTICS

Intrusion Detection

The Intrusion Detection feature enables you to draw a virtual quadrilateral anywhere within the camera field of view. The camera monitors this quadrilateral and can be set to sound an alarm, start recording or send a notification whenever a person or object enters the designated area.

Intrusion Detection is ideal for detecting events such as:

- A person enters a restricted area or 'No Loitering' zone
- A person enters a secure area within a facility
- A person walks onto a homeowner's property
- A vehicle parks in a 'No Parking' zone
- A vehicle enters a drive-through
- A truck enters the approach zone at a loading dock

Features & Benefits:*

- Easily configure Intrusion Detection to identify objects that meet certain requirements:
 - Are smaller than a maximum size, and larger than a minimum size
 - Enter and stay in the quadrilateral zone longer than a minimum time
- Adjustable camera sensitivity allows you to set maximum and minimum size of objects to be detected entering the area, to prevent false alarms and/or event triggers
- The VCA Search feature saves time by allowing you to quickly find, review and download video of Intrusion Detection events
- The Video Playback feature allows you to easily review and analyze Intrusion Detection events
- Intrusion Detection analytics are more reliable than traditional motion detection, because sensitivity settings can be configured to reduce the incidence of false alarms
- Customized triggered event recording reduces hard drive storage requirements

Applications

- Airports
- Banks
- Car Parks
- Construction Sites
- Correctional Facilities
- Medical Facilities
- Military Bases
- Power Plants
- Schools
- Warehouses
- ...and more

**Alibi DVRs, NVRs and IP cameras can perform Intrusion Detection analysis*
